

[FOR IMMEDIATE RELEASE]

## SPACE CENTRE AUSTRALIA SECURES LICENSE WITH ORBIT BOY LTD FOR HORIZONTAL AIR LAUNCH VEHICLE

Space Centre Australia proudly announces a landmark exclusive license agreement with UK-based Orbit Boy Ltd, granting us exclusive rights to launch, manufacture, enhance, and operate the revolutionary Orbit Boy Launch Vehicle in select jurisdictions. Further, the rocket and delivery system will be manufactured by SCA in United Kingdom, Australia, United States of America and Canada creating our own sovereign launch capability, economic development and advanced employment opportunities for the aerospace sector.

The Orbit Boy launch platform stands as a game-changer in the industry, offering unparalleled access to Low Earth Orbit (LEO) and Sun-Synchronous Orbit (SSO) for the Micro, Cube, and Small Satellite market. The patented horizontal launch system, adaptable to various mission profiles and operational envelopes, is carrier-agnostic, ensuring flexibility and efficiency. Notably, our responsive launch system boasts high mobility and interoperability, capable of achieving singular launch readiness in under 24 hours as well as dedicated scheduled rideshare options.

This exclusive license agreement signifies a monumental step forward for Space Centre Australia, paving the way for advanced manufacturing, research and development, and increased employment opportunities within the aerospace industry. By leveraging this partnership, we aim to revolutionise space access and foster economic growth, technological advancement, and community development in the regions we serve.

CEO of Space Centre Australia, Mr. James Palmer, commented, *"This agreement marks a significant milestone in our pursuit of advancing space exploration. With access to the Orbit Boy Launch Vehicle, we are poised to drive innovation and create lasting impact in the aerospace sector. There is a known market gap in the horizontal air launch sector servicing small satellites to LEO and SSO and with our new agreement SCA will provide sovereign in country capability in the USA, UK, Australia and Canada to service this market segment in a fast, safe and cost-effective way."*

In response, Director of Orbit Boy Ltd, Mr. Robert Slonje, remarked, *"We are thrilled to collaborate with Space Centre Australia in expanding the reach of our revolutionary launch technology. Together, we aim to redefine the possibilities of space access and propel the industry forward into a new era of exploration."*
